The following is an examiner's statement of reasons for allowance: Pronin et al (the article entitled "Electronic and optical properties of LiBC") discloses that LiBC was synthesized from the elements at 770 K in sealed niobium ampoules. However there is no teaching, disclosure or suggestion in Pronin et al to carry out the heating by arc-melting a pellet of uniformly-mixed elemental lithium, boron, and graphite sufficient to trigger a self-propagating reaction, to heat uniformly mixed elemental lithium, boron and graphite in a tantalum ampoule, or to press the lithium, boron and carbon mixture into a pellet and heat the pellet to trigger a self-propagating exothermic reaction. Nor would there be any motivation from the prior art to do so..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wayne Langel whose telephone number is 571-272-1353. The examiner can normally be reached on Monday through Friday, 8 am - 3:30 pm Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
